

# CODE GENERATION 2010

June 16-18 Cambridge UK

Supporting Partners

## Call for Speakers

**Submission Deadline: Friday January 15th 2010**

### Europe's leading event on Model-Driven Software Development

With its focus on sharing **practical** experiences, Code Generation 2010 is the ideal opportunity for software practitioners to learn how to apply the emerging tools, technologies and approaches in the broad area of Model-Driven Software Development.

We are seeking high-quality session proposals covering topics in model-driven software development (including *Domain-Specific Languages (DSLs)*, *Model-Driven Architecture (MDA)*, *Executable UML*, *Software Factories & Software Product Lines*, *Generative Programming* and related areas). Sessions could cover topics such as:

- Tool and technology development and adoption
- Defining and implementing modelling languages
- Code Generation and Model Transformation tools and approaches
- Language evolution and modularization
- Metamodeling
- Runtime virtual machines versus direct code generation

**Case studies** and **interactive sessions** based on these and related approaches are particularly encouraged although more theoretical sessions are also welcome.

Accepted speakers have their conference fees waived

For full details and instructions on how to submit a session please visit:

<http://www.codegeneration.net/cg2010/speak.php>

Hear what participants thought about last year's conference in this short video clip:

#### What others said about our previous events:

*"The combined—for that matter, individual—expertise present was remarkable, and presented a tremendous opportunity for knowledge exchange."*

*"The wealth of MDD knowledge present at the event was impressive, not only from the presenters, but from the other delegates as well."*
